

Waterrower Heart Rate Technology Set (ANT+)

Digitally coded 2.4 Ghz connection for receiving the heart rate. The Series 4 power monitor is extended with a small circuit board that enables wireless reception from the "paired" transmitter (chest strap).

CHF 99.90

The Series 4 power monitor is extended for this purpose with a circuit board that enables wireless reception from the paired transmitter (chest strap). The advantage of mounting the board inside the console is that no plugs are attached to the outside of the console and the design is not compromised.

ANT+ is a wireless technology for combining different devices with each other - in this case to display the heart rate. The technology is particularly energy-saving, as the devices automatically switch to sleep mode after operation.

Scope of delivery: Receiver (circuit board) and transmitter (chest strap)
