

Option for SlimBeam: Care set

The SlimBeam by NOHRD is made of real wood veneer, so the pulley is inherently robust and resistant. To ensure that the SlimBeam retains its aesthetic look for a long time, we recommend regular treatment with our care set. The microfibre cloth removes dust and dirt without scratching. If finer scratches or dents occur during normal use of the SlimBeam, the veneer can be carefully roughened with the sanding fleece and then repaired with the wood care oil. The stainless steel parts of the SlimBeam can be polished up with the metal emulsion.
