

USB with 6 Passport Set Up Box videos

Passport Media Player with Virtual Active is an interactive training program in which the athlete runs, drives and hikes through real landscapes. Instead of staring at the walls while training, the athlete can now experience the landscapes in a dynamic video - interactively and in HD quality.

CHF 69.00

Passport is a Virtual Active System where you can walk and drive through landscapes and cities. The films are always delivered on a USB stick, which is then simply inserted into the box. If the training device already has Passport integrated, then the USB stick can be inserted directly into the device.

The operation of devices with Passport ready is done comfortably from the fitness device via a small remote control. The training data from the fitness device is transferred to the box via W-Lan. On training devices with Passport integrated, the operation of the films is done directly via the display.

Your training data is shown on the films as an ON-screen display and can also be changed in position. In the Passport system you have the possibility to create 5 users and one guest. The data that can be stored per user are age, gender, weight and language. With the language you can choose between German, English, French and Spanish.

The movies were filmed while people were running through the track. This makes the training experience 100% realistic. You meet other people and are informed about everything worth knowing about the corresponding landscape and city via a ticker.

The training device varies the resistance according to the gradient of the video landscape, the playback speed of the video in turn adapts to the pace of the trainee and even ambient sounds can be perceived.
