

Waterrower Tank Glue Kit

Tank Glue Kit - for gluing the WaterRower Tank

CHF 39.90

If your WaterRower tank has a leak in the adhesive seal (seam), it is best to repair it with the Tank Glue Kit. Only suitable for spot repairs. It is not possible to glue the tank completely. Please handle the tank carefully, as a crack in the top or bottom half would cause irreparable damage. If the tank halves show cracks, they must be replaced.

The handling is very easy due to the handy double syringe (twin syringe). When using the syringe, mixing takes place automatically.

Contents:

- Syringe
- 2 x 12ml two-component adhesive
- Mixing nozzle

If the complete tank needs to be glued, please contact Shark Service:
