

Tanita RD-545 HR Bluetooth Body Composition Monitor

Segmental Body Composition Monitor with wireless connection - Take control of your body with the Tanita RD-545. With this accurate scale, you can monitor 20 types of body compositions and measure each part with pinpoint accuracy. Then set your goals and chart your progress with the MyTanita app. Customize your training program according to your activities and body composition.

CHF 529.00

The RD-545 delivers extremely precise medically accurate BIA readings thanks to dual frequency technology, otherwise only found on professional medical devices.

Your entire body is measured segment by segment using dual frequency reactance/resistance technology and analyzed in detail. Arms, legs and torso are measured separately. Changes and individual differences in measurements can now be analyzed with medical accuracy. Especially suitable for top athletes, bodybuilders, health and body conscious people.

Your whole body is measured segment by segment with dual frequency reactance/resistance technology and analyzed in detail. Arms, legs and torso are measured separately. Changes and individual differences in measurements can now be analyzed with medical accuracy.

Measurements:

- Weight
- Body fat in %
- Total body water in %
