

## Jordan High Grade Premium Rubber Bumper Plates 51mm, Colored (JLCRTP2)

High Quality Jordan High Grade Premium Rubber Weight Discs (Bumper Plates) colored with 51mm hole diameter. Made from a high grade colored rubber for durability as well as a clean, stylish aesthetic. These colored weight plates are incredibly strong and durable Olympic weight plates and are great for strength and conditioning workouts. (Priced from 5kg disc) Bumper Plates are commonly used in weightlifting clubs, CrossFit boxes and professional gyms where weightlifting is a main focus.

**CHF 49.00**

Bumper Plates are special weight plates used mainly in weightlifting and strength training. Unlike conventional weight plates, they are made of dense rubber or hard plastic and are designed to cause minimal damage when dropped on the floor. The main purpose of Bumper Plates is to improve the safety and longevity of weight exercises, especially in exercises such as the clean and jerk in weightlifting, where the weight is often dropped from an elevated height.

Features and benefits of Bumper Plates:

**Impact Absorption:** Bumper Plates are designed to absorb and cushion the impact to the ground when the weight is dropped. The rubberized or plastic-coated material helps protect the floor and reduce damage or noise.

**Safety:** Using Bumper Plates reduces the risk of injury. When weight is dropped from a great height, the elasticity of the material reduces the likelihood of injury or damage to equipment.

**Barbell Bar Protection:** Bumper Plates also serve as protection for the barbell bar. The rubberized material helps protect the dumbbell bar from damage due to impact.

**Weight Identification:** Bumper Plates are usually available in different colors, with each color representing a specific weight. This makes it easier to quickly identify the amount of weight being used.

**Bumper Plates from Jordan**

- Designed in accordance with International Weightlifting Federation (IWF) and International Powerlifting Federation (IPF) color standards
- Passed 10'000 test throws from 2m height
- with 50,44mm hole diameter
