Blazepod standard kit with a total of 4 LED light sensors. Pods can be charged with supplied charging station on USB port. Includes free BASIC version of the training app (connects to max. 6 pods, 6 custom exercises can be saved, access to main exercises of the exercise library) and 6-month trial pro membership.

CHF 369.00

4 LED sensors for training reaction and action speed in sports and fitness. Scientifically proven that athletes with excellent reaction are more successful than others. Blazepod Trainer Standard Kit provides the trainer with 4 LED lights that can be placed on the floor.

With the optional Functional Adapter Kit, the LED sensors can also be fixed to the wall, attached to posts or suctioned to mirrors and windows. (Screws for wall mounting are not included).

Operate the sensors with your own mobile device iOS or Android. Switch on Bluetooth, install the APP and off you go. The extremely user-friendly APP allows any combination of sensors in training. The sensors are deleted with a light clap or after an individually adjustable switch-off time.

Competitions in teams of 2 with 2 sensors, alone or with entire teams are possible without further ado. Our tests have inspired us to use Blazepod Standard Kit at all levels. Without any pressure in training exercises or in competitions with other athletes.
