

## BRUTEforce® RAPTOR Lever Gym

The RAPTOR Lever Gym makes it possible to train all muscle groups with several exercises for each body part. The RAPTOR Lever Gym is suitable for permanent use by personal trainers, clubs or hotels as well as for high-end private use. With the combined weight loads for Pressing/Squatting Arms 250kg and Cable/Pulley 200kg, the RAPTOR Lever Gym is just as effective for the "beginner" as it is for the "advanced" user. Equipped with adjustable safety limiters provides safety and a safe environment when attempting your "MAX".

### **The birth of the RAPTOR Lever Gym**

The Lever Gym concept has been around for over 20 years with very little change in that time. The BRUTEforce® design and production team has spent two years redesigning and improving this basic but effective concept, and now the RAPTOR Lever Gym is here. The design and production team, made up of sports professionals who are serious trainers and know their stuff, created a product they wanted to use themselves.

Every inch of the machine has been re-evaluated, with fine-tuned levers and added features. Some of the changes are subtle, resulting in slightly better muscle contraction on exercises like tricep extensions, bicep curls and lat pulldowns. Other improvements such as "arch" and range of motion on leg curls and the addition of a multi-grip pull-up station are much more obvious. The "Squat Bar Quick Release System" is unique to the RAPTOR Gym and allows users to position themselves under the fully loaded bar at the top of the movement, unlike other brands that require you to bend low under the bar.

### **BRUTEforce RAPTOR Lever Gym in detail**

The two arms of the RAPTOR Lever Gym can be used with the link bar holding them together for squats, deadlifts, shrugs, calf raises and other basic compound movements, or they can be used without the link bar for more isolated independent movements, such as presses, shoulder presses and more. Even when locked, the arms make a great station for heavy dips. The stations with two pulleys, one high and the other at floor level with a load capacity of 200kg, offer a variety of exercises such as lat pulldowns, tricep presses, abs, seated rows, bicep curls, upright rows and core twists. By attaching the foot strap (included) to the lower cable pulley, even more options are available, adductors, abductors,

hamstring kickbacks, focused single leg extensions and more.

**High quality design, workmanship and materials define the RAPTOR Leverage Gym**

Superior design and engineering provide a safer and more natural range of motion when the body is in action. Equipped with an adjustable safety pin to safely execute maximum performance.

**Enlarged footplate**

The shape and size of the "checker plate" platform has been increased to create a spacious and safe working area.

**Compact footprint**

The space-saving footprint is just another pleasant surprise of the RAPTOR Lever Gym. Despite all its features and all the training functions it can achieve, the footprint is still only: width 138cm x length 190cm x height 216cm. Designed with four (4) weight plate storage horns that can hold up to 320kg. The perfect fit for your home gym or any light institutional facility.

**Pull-upstation with multiple handles**

The pull-up station offers over 5 handles for long and short arm spans and is equipped with climbing handles/cups for even more variety.

**Olympic weight plate storage bars**

The 4 bars positioned on the main frame can carry up to 320kg of Olympic weight plates when not in use.

**Construction**

Main frame with 70mm x 50mm premium 3mm thick steel tube. Lever arms 3mm thick steel with heavy duty bearings. Padding is high density industrial grade foam with commercial grade padding. The frame is coated with a durable, powder-coated anti-rust finish. Bearing pins, nuts and bolts are industrial grade with high tensile strength for heavy loads.

- high-quality strength training equipment with top design and high-quality workmanship - developed in Australia
- optimum freedom of movement
- maximum safety
- high stability
- stable construction made of 70 x 50 x 3 mm thick steel tube
- quick, easy and safe handling
- including 4 disk holders (diameter 50mm) for storage on the main frame with high load capacity: up to 320 kg
- high-density foam padding
- surface treated with corrosion-resistant powder coating
- with rubberized protective feet, gentle on the floor
- in gray-anthracite/copper color combination
- including 5 handles at the pull-up station for short and wide arm stretches
- equipped with different handles for more variety during training
- can be used with a connecting bar for deadlifts, squats, shoulder or calf exercises
- two arms made of 3 mm thick steel with durable bearings
- stations with combined upper and lower pulley
- with a payload of up to 200 kg for lat pulldown and seated rowing

- the "checker plate" base guarantees maximum safety during training
- Safety footrest for additional support during training

Use: Home

Equipment dimensions: L190 x W138 x H216cm, weight: approx. 161kg

Accessories: foot strap, connecting bar, lat bar, short bar, 2 x 51mm fasteners, 2 x extension chains

(Note: bench, calf block, elastic bands, tricep rope and weight plates from the video and photos are not included, but can be purchased separately)

Option: 51mm plates

Warranty: Home use: 2 years on labor and parts (excluding consumables)
