

## Weider L-Carnitine 100 capsules

High quality Carnipure, easy to dose.  
Contains 100 percent pure L-carnitine

**CHF 23.90**

L-carnitine is a compound produced naturally in the body whose task is to transport fatty acids from the inside of the cell to the "energy power plants", the mitochondria. Once in the mitochondria, the fatty acids are "burned" to produce energy. In the body, L-carnitine is produced from the amino acids L-lysine and L-methionine and is also found naturally in meat, cereals, nuts, mushrooms, fruit and vegetables and is therefore part of the normal diet. The L-Carnitine Capsules contain high-quality L-carnitine tartrate, i.e. L-carnitine bound to tartaric acid. Here we rely on the renowned brand raw material Carnipure to guarantee maximum quality

- 1,500 mg L-carnitine per serving
- naturally occurring, endogenous molecule
- transports the fatty acids into the power plants of the cells (mitochondria)
- high-quality Carnipure
- ideal before strength or cardio training

Packaging unit: can of 100 capsules

Flavor: neutral

Content: 88g
