

Tanita BC401 Bluetooth Body Composition Monitor

TANITA BC-401 is a compact and highly accurate body composition scale, ideal for use by the whole family. The scale stores the data of five people and measures only what is really relevant for children (between 5 and 17 years), namely weight, BMI and body fat percentage. In this way, everyone gets an insight into their own body composition and works together on their own health goals.

CHF 99.00

With the Tanita BC-401 body composition monitor, users can perform a complete analysis of the total body composition. In addition to weight, this device is particularly useful for athletes who want to monitor their progress reliably at all times. This is because the scale also measures metabolic age, body fat, muscle mass, basal metabolic rate or BMI, among other things. The very large display shows the measured values clearly visible even in poor lighting.

The BC-401 also measures your metabolic age. A unique measurement that only TANITA body composition monitors perform. This measurement calculates your basal metabolic rate (BMR) and compares it to the average for your age group. Is your metabolic age lower than your actual age? Then you are on the right track. If it's higher, there's something to do.

With the MyTANITA app, all the results of a measurement are sent directly to your smartphone or tablet. The insights gained over time will motivate you to reach your long-term goals!

Product Features:

- Bluetooth
- Automatic recognition
- Recall function
- Clock, calendar
- Guest mode
- Sportsman mode
- 5 user memories

Included body value measurement functions:

- Weight
- Body mass index (BMI)
- Body fat in %
- Visceral fat
- Muscle mass
- Body composition value
- Bone mineral mass
- Basal metabolic rate
- Total body water in %
- Metabolic age

Technical data:

Color: white, black

Weight 1,9kg

Weighing capacity 150kg

Mass: 217 x 316 x 27mm

Material: glass

Accuracy 100g

Power supply: battery (incl. 4 batteries (AAA))
