

Sissel Fitband 7.5cm x 2m

The 4 training bands are of different strengths and allow an individual workout! The more the band is stretched, the more the resistance increases. The band contracts when the force decreases. Just perfect for working out at home, in the office, gym, outdoors or even while traveling.

The Sissel Fitband is a fitness and physioband. It is a simple and inexpensive tool for increasing general strength, endurance and coordination. Thanks to the clips it is suitable for door applications. No more knotting of the bands due to patented clip. Available in different sizes and thicknesses. The reduced content of latex proteins and powder in the bands reduces the occurrence of latex allergies (research by the Royal College of Physicians UK).

- with clip also suitable for door application, incl. exercise instructions
- for strength, endurance and coordination
- simple and inexpensive aid to increase general strength, endurance and coordination
