

## Tunturi Exercise Trainer - Cardio Fit M50 Mini Bike Motorized (21TCFM5000)

Keep moving with the Cardio Fit M50 Mini Bike - ideal if you find it difficult to keep moving or want to regain mobility after an injury - then the Tunturi Cardio Fit Trainer M50 is the ideal solution. The electric Cardio Fit Mini Bike M50 allows you to exercise your legs and arms while moving. The movement trainer from Tunturi is lightweight and compact, so it can be stored space-saving.

**CHF 249.00**

The M50 Mini Bike Trainer from Tunturi is electrically powered with an integrated motor. Thus, no effort is required and you can keep the movement at any speed. In addition, this mobility trainer has an extra wide foot plate with an anti-slip function and adjustable foot straps for a stable hold during exercise. With the electric mini-ergometer, you will mainly exercise your ankles, knees, hips and leg muscles, stimulating blood circulation. If you put the mini bike on a table, you can use the pedals as handles and exercise the arm muscles, wrists, back and shoulders while sitting on your chair. We recommend this mini bike trainer especially for physiotherapy purposes at home.

With the integrated and easily removable remote control you can set speed, time, programs and the direction of travel (forward or backward). On the remote control you can also view the time, distance and number of calories burned.

### Advantages:

- motorized
- with 12 speed levels and 5 programs
- extra wide footplate with an anti-slip function
- adjustable foot straps
- integrated and easily removable remote control
- stimulates the blood circulation
- compact and lightweight
- suitable for arm and leg training
- suitable for forward and backward movement
