

FluidExercise E850 UBE

The FluidExercise E850 Upper Body Ergometer UBE is a high quality, robust, commercial bi-directional arm bike for the standing and seated position. The upper body ergometer is designed to train the upper body muscles. Depending on the positioning, shoulders, arms or the stabilization muscles in the torso area are trained. Due to the various adjustment possibilities, the upper torso trainer adapts optimally to the respective user. At the heart of every FluidExercise machine is the patented, adjustable Twin Tank fluid resistance system. Each machine offers a wide range of resistance from featherweight to Olympic intensity while remaining silky smooth at any speed. All FluidExercise machines use the patented vertical tanks that create a unique look, sound and feel with up to 10 different resistance levels. The full line of FluidExercise equipment works perfectly in both forward and reverse, with the ability to change resistance and direction "on the fly."

CHF 4'890.00

The FluidExercise E850 UBE from FluidRower is suitable as an upper torso exerciser standing or sitting for training and rehabilitation. The resistance can be adjusted on the E850 via the patented 10-position adjustable fluid resistance dual tank. Resistance is silky smooth at any speed, so completely independent of the resistance setting, you can choose a pace that works for the exerciser. Adjustable fluid resistance quickly and easily changes from "feather light" to "Olympic challenge" and works in both forward and reverse directions for complete muscle engagement. You can even change resistance and direction on the fly.

The E850 seat can be completely removed to allow access to the fitness ball and standing. With the ability to adjust the seat position and crank height, the ergonomics meet most individual needs.

The FluidExercise E850 UBE is the ideal addition for a variety of exercise and rehabilitation applications, cardio, core and shoulder girdle.

The E850 has the added benefit of requiring no external power supply, so it can be installed on any flat surface in the gym or home.

Features:

- Seat removable for use with an exercise ball or for standing exercise performance
- Wheelchair accessible
- Resistance generated by water resistance
- 10 Adjustable Resistance (AR) levels via rotary knob
- Auto-Adjust (level on console display adjusts to tank level)
- Forward and backward movements possible
- User-friendly training computer (Interactive Performance Monitor): LCD display for time, distance, calories burned per hour, resistance level, heart rate, wheel rotation, watts
- Bluetooth compatible for integration of rowing and fitness APP's
- Tank made of unbreakable polycarbonate
- Stainless steel water wheel
- Main arm adjustable horizontally to vertically in 5° increments (via gas pressure cylinder) - from sitting to standing position
- main arm height adjustable from 71,5cm to 124,5cm
- seat height adjustable - lowest seat height 54cm
- fixed handle arms
- ergonomic handles
- solid, non-slip footplate
- color: grey
- target price CHF 5'699.--

Use: home area to commercial continuous use, payload: approx. 150kg

Equipment dimensions: L156 x W102 x H140cm, space requirement: L276 x W222cm, weight 120.1kg (without water filling)

Accessories: integrated pulse receiver

Options: Transmitter belt, floor mat

Warranty: home use: 1 year on labor, 2 years on parts (excludes consumables), commercial use: 1 year on labor and parts (excludes consumables)
