

## Waterrower chlorine tablets sachets 2 x 6 tablets

Slow dissolving, high quality care tablets for the water tank. The tank remains free of limescale, deposits and residues.

CHF 19.80

Puritabs MAXI - slow-dissolving, high-quality maintenance tablets. Simply place one tablet in the tank every two months as needed and it will remain free of limescale, deposits and residues.

We recommend using clear water for the WaterRower tank - directly from the tap or still drinking water. However, in the long run, deposits, limescale and algae formation can occur in the tank. Especially if the WaterRower is not used for a longer period of time, these deposits can occur.

**Please do not use in combination with blue water paint - the care tablets dissolve the paint!**

6 tablets per pack are enough for a whole year (double pack for 2 years)

Scope of delivery: 2 x 6 tablets
